

S L X

The SLX 45 has identical looks and features to that of the SLX20, but features a thermostatically

controlled, integral boiler that delivers a heat output sufficient to power 8-9 radiators and ample hot water. Because it is fitted with a water temperature sensitive thermostat, heating controls (such as the Charnwood Central Heating Control System - page 49) can be fitted, to give heat precisely when and where it is needed.

Once again it is available as an inset or freestanding appliance with a choice of a matt paint finish (eight colour options - see page 56) or gloss black vitreous enamel.
